

# IMPROVE CLIMATE CHANGE EDUCATION AND AWARENESS IN YOUR SCHOOL

Teaching Green is an international project that aims to support the competencies and skills of teachers (of students aged 10-16) in the implementation of practical environmental education which raises the awareness of climate change, its impacts and mitigation actions.

Our objective is to support critical thinking, digital skills, sense of social responsibility for local environment and foster the environmental behavior of students.

## WHAT YOU WILL RECEIVE

### TEACHERS

- **6 x 30min online training modules** aimed at strengthening your green skills and competencies and increasing knowledge for practical climate education.

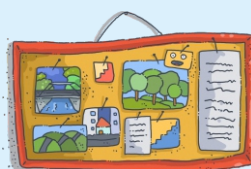

- **certification** for practical climate education

### STUDENTS

- **evaluation toolkit** of pupils character qualities

- **toolkit for monitoring the local environment** in rural and urban areas in connection with climate change, including challenges for students

### SCHOOLS

- **best practice report** for publication of citizen science experiments with possibility of presenting for the European Commission

- **international networking** with twin schools to share experiences and entice students
